ECLIPSE

SEE YOUR HOME IN A MORE ELEGANT LIGHT

By choosing the Eclipse PVCu Window and Door system, you are guaranteed a range of beautifully designed products that will effectively enhance the appeal and ambience of your home. Encompassing a complete range of fully integrated products, the Eclipse system helps you to create the home of your dreams.

Excellent engineering and outstanding workmanship underpin our commitment to both quality and value.

The elegant Eclipse range comprises an innovative portfolio of stylish windows and tasteful doors. Each product is perfectly suited for use as an individual item or to create spacious conservatories and sunrooms too.

From your initial enquiry right through to the perfect finish, you'll also experience a standard of customer service that's second-to-none.

Whether your home is large or small, semi-detached, detached, terrace, bungalow or high-rise, Eclipse will transform your home.

See your home in a different light.
Choose Eclipse.

Looking good has never been easier

The Eclipse range encompasses a variety of styles and finishes to help you achieve the perfect look. From contemporary and stylish to traditional and sophisticated, your installation adviser will help you choose the design that best enhances your home and lifestyle.

You may wish to replicate the arrangement and style of your existing windows or, perhaps take the opportunity to create a totally different look.

In addition to the clean White PVCu finish, the Eclipse system includes Rosewood and Light Oak finishes. The inherent strength and flexibility of the system allows a great variation of

designs to be safely manufactured, from large 'picture' style frames to Georgian-style panels. What's more, because the Eclipse system has been installed in thousands of homes over the years, we know what works – and what doesn't!

Your installation adviser will be delighted to help you achieve the perfect look for your home; from your dreams to reality.

LOW MAINTENANCE, HIGH SECURITY

Whichever style you choose, it's easy to make sure your windows stay looking their best.

Low maintenance means exactly what it says. The high quality PVCu that goes into our windows is designed never to rot, peel, crack or warp – no matter what the weather throws at it.

The superior appearance of Eclipse products is easily maintained by simply wiping them down with a mild liquid detergent as required. Enduring operational performance is assured by lightly lubricating pivot points annually. Apart from that, you can leave your new

Eclipse windows to take care of themselves.

There are no worries about security either; with an extensive range of security options available. Eclipse windows and doors are designed to meet or exceed independent industry security tests. Key security features such as security-protected hinges, extra strong 'shootbolt' locking systems and lockable night vents are all part of the Eclipse security portfolio.

Safety is important too – in case there's a fire - also included in our portfolio of options is a "Fire Safety" hinge that

allows a casement window to open to a full 90 degrees thus providing an emergency exit in case of fire.

It all adds up to a choice of safety and security options that deliver real peace of mind.

KEEPING NOISE OUT AND THE WARMTH IN

In addition to looking great, your new windows are supremely practical. Excellent insulation properties can significantly reduce the noise from outside the house and help create a quieter life inside. Your new windows will also help to tame your energy bills by keeping the warmth inside your home.

Noise reduction is achieved by means of the gap between the glass panes in the sealed double glazed unit. With a gap of 20mm, the average sound reduction is 28 decibels. The sealed units used with the Eclipse system incorporate a gap of between 20mm and 24mm so the sound reduction properties are highly effective.

Insulating against heat loss works in much the same way, by creating an effective barrier against cold from the outside. Badly fitting old windows can let in draughts and can also 'leak' warmth through the glass and frames themselves. The additional thermal insulation provided by low emissivity glass and the performance properties inherent in the design of the enclosed chambers within the Eclipse profiles means heat loss is a thing of the past.

Energy conservation is so important these days that it's built into building regulations. The standard is measured in 'U' values. The 'U' value measures the amount of heat that is lost from inside to outside; the lower the 'U' value the better the thermal performance.

Building Regulations state that the minimum acceptable 'U' value for windows is 2.0. Eclipse windows more than meet the standard, achieving a 'U' value as low as 1.3. Now, that's what you call cosy.

QUALITY ASSURED, SUPERB VALUE

Quality assured, superb value
Your home will look fabulous but only you will know the true value for money you have secured for you and your home. By selecting items from the Eclipse Window and Door system you are guaranteed a range of beautifully designed products that meet or exceed the design appeal, technical specifications and accreditations of the industry.

Installations are carried out by local installers who are properly trained to install your windows with the minimum of disruption and mess.

Exceptional quality and excellent value for money go hand in hand whatever style of Eclipse window, door or conservatory you choose.

MADE TO MEASURE, EXPERTLY FITTED

Every Eclipse window and door is individually surveyed and manufactured using state-of-the-art manufacturing equipment and processes.

As well as casement windows, the Eclipse product range also includes eye-catching traditionally styled French windows, contemporary patio doors and traditional 'sash' style vertical sliding windows.

Eclipse windows, doors and conservatories are manufactured to the very highest standards and comply with Building Regulations when installed by FENSA registered companies, or through the auspices of local Building Control Departments. FENSA is a self-regulatory scheme, approved by the government, with strict codes and guidelines that ensure correct standards and procedures for all installations.

Each Eclipse window frame is manufactured from high quality, high grade PVCu polymers, which are especially formulated to withstand the rigours of the Central European climate and are extruded to form thick walled, window profiles.

Frames may be mechanically jointed or fully welded and include galvanised steel reinforcing bars within the profiles where required. High quality glass sealed units are added and the end result is that your custom built Eclipse windows have a superb finish and a long lasting durability that has been fully weather tested for excellent performance year after year.

Choose from a thoughtfully compiled selection of handles, hardware and security and safety options and your Eclipse installation will be just what you dreamed of.

Next steps....

Your installation adviser will take you through each stage of the process from initial advice to final fitting.

Light Oak

Rosewood

Cross section of typical Eclipse casement window

Chamfered frame and sash profiles

Choice of sculptured or chamfered beads (sculptured shown)

Hermetically sealed double glazed unit

2 Weather protection gaskets

70mm Front to back frame as standard

3 Chambers

Galvanised steelreinforcement*

Please ask your installation adviser about the comprehensive range of eclipse security safety options.

*Reinforcing will be fitted in line with the system company's standard reinforcement guidelines

Guaranteed for a full 10 years

Quality windows fitted by experts with an extensive guarantee from your local installer, which is backed by a comprehensive 10 year guarantee on your profile. For a great choice of styles and designs, you can't go wrong when you choose from the Eclipse range.
